Slyce Website Package

✦ **Cost: \$2000.00**

Slyce is a content management system designed to provide non-technical web users with a straightforward web page creator and editor that is both easy to use and understand. Slyce offers quick links to all web page management and design features. With Slyce's self-explanatory administrative layout, you can effortlessly create, edit, update, and manage your web pages.

Slyce provides you with the web page tools necessary to create visually stunning web pages that will be sure to impress visitors. Artistic design not your strong point? Not a problem. Using the creative genius of our experienced graphic designers, individual web pages can be entirely custom designed or are capable of integrating features and designs of other web pages.

We will begin with a design meeting to develop a custom home and interior web page layout. We will ensure that the web page layouts match your company branding and corporate identity. In addition, client-provided website content (text, pictures, and videos) is altered professionally by our design team before being inputted to make certain the content enhances and suits the website layout.

With the Slyce website package we will input up to 5 pages of client-supplied digital content including web page copy (text), photography, and media files. Numerous additional interior web pages can be created with our virtually unlimited web page capacity. If your website requires the input of more than 5 pages of content we can provide assistance charged on an hourly basis.

We will provide basic application training at our location.
