

TMDA Challenge/Response System

Protect Your Inbox with TMDA

2010

TMDA Challenge/Response System

• Cost: \$25.00 annually per POP3 mailbox

The time people spend checking and managing their email accounts is on the rise. Information is important and receiving all e-mail messages is crucial to an organization. However, simply receiving e-mail becomes a burden when you have to differentiate valid e-mail from hundreds of unwanted "junk" e-mail (spam) on a daily basis.

The TMDA challenge/response system analyzes e-mail from all unknown recipients and subjects it to a challenge/response buffer system where it awaits pending approval before being sent to your inbox .

Protect your inbox with TMDA's (Tagged Message Delivery Agent) challenge/response system and save countless hours every week by diverting unwanted Internet junk mail to the trash bin rather than tediously searching through all senders/subjects to differentiate among legitimate e-mail.

FEATURES

- Create "whitelists" that accept mail from confirmed known and trusted senders
- Create "blacklists" that refuse mail from unknown or unwanted senders
- Approved e-mail addresses will be added to your "whitelist" of "safe" recipients, while refused e-mail will be added to your "blacklist" and considered spam and sent to the trash
- Easy customization of auto-responses through a template system

• Cost: \$25.00 annually per POP3 mailbox
